PROFILE

Frontend Developer with 4+ years of experience specializing in building scalable, accessible web applications using React, Next.js, JavaScript and TypeScript. Proven track record in optimizing performance for data-intensive platforms, architecting complex state management systems, and streamlining CI/CD pipelines within Agile environments.

PROFESSIONAL EXPERIENCE

Software Engineer, CGI

08/2021 – Present | Bengaluru

Project 1 — Newsroom Computer System (NRCS)

- Built and optimized complex, data-intensive tables using React Table and **react-window** virtualization, implementing dynamic sorting, filtering, pagination, debouncing, and memoization to ensure smooth rendering of 20k+ records.
- Integrated the vkurko/calendar open-source library to develop a **custom scheduler** for client workflows, enabling efficient event creation, tracking, and **calendar management** within the rich-client application using JavaScript.
- Reduced average task completion time by 40% and increased user satisfaction by 25% by redesigning **core UI workflows** based on **A/B testing** and user feedback.
- Introduced performance optimizations such as **memoization**, **lazy loading**, and **bundle splitting**, reducing initial load times by 20%.
- Enhanced **accessibility** across the platform, adhering to WCAG standards and implementing semantic HTML and ARIA roles.
- **Mentored a junior developer** in adopting modern development practices through regular code reviews and pair programming, improving code quality scores by 20% and reducing bug reports by 15% over four months.

Project 2 — Credit Management Platform

- Increased development velocity by 30% across 5+ product modules by architecting a library of **20+ reusable React components**.
- Built chatbot enabling natural-language queries for policies and procedures, **reducing documentation lookup time by 40%** and improving agent productivity by 20%.
- Built a **bulk-event upload workflow** with client-side validations, drag-and-drop file import, and streaming support for 25,000+ records.
- Optimized network efficiency by implementing request **deduplication** and **data caching**, reducing redundant API calls by 15% and decreasing server load.
- **Took ownership** of migrating 10+ repositories from deprecated Moment.js to Luxon, reducing date-library bundle size by ~70% (75.4KB → 23KB) and future-proofing date/time handling across the codebase.

SKILLS

- **Languages:** HTML, CSS, JavaScript, TypeScript, C++
- **Technologies:** React, Next.js, Nodejs, Redux, React Query, Zustand, Tailwind CSS, GraphQL, Git, Vite, Jest, Jenkins

EDUCATION

Bachelor of Technology,

National Institute of Technology (NIT), Allahabad

07/2017 – 06/2021 | Prayagraj, India

PERSONAL PROJECTS

Decora: Full-Stack Furniture Application

Developed a furniture marketplace using Next.js, TypeScript, Supabase, and Clerk with admin and user roles, featuring product management, shopping cart, favorites, and customer reviews.

Analytics Dashboard

Built a responsive dashboard with drag-and-drop widgets, animated layouts (Animate CSS Grid), Angular Signals for state management, and interactive Chart.js visualizations using mock data.
